

LAB 2: AGILE BACKLOG CREATION & SPRINT SIMULATION IN JIRA

NAME : PRUTHVIRAJ AJAY PATIL

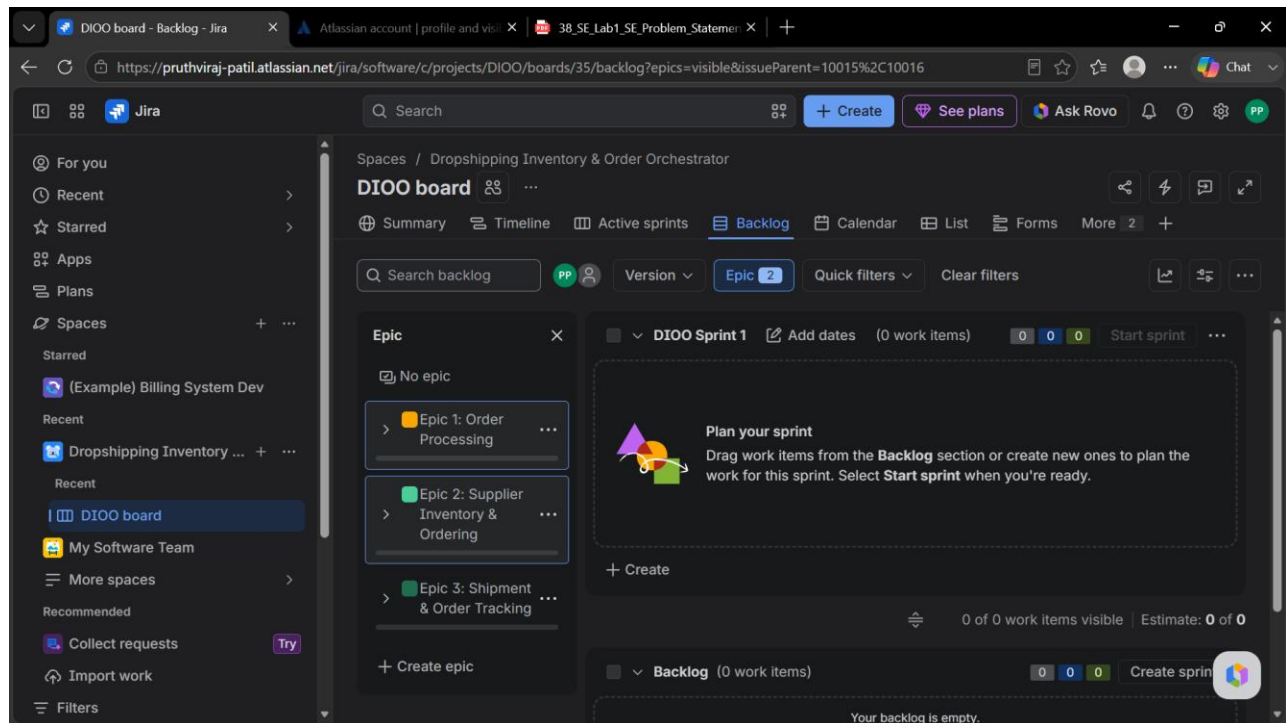

SRN : PES1UG24CS345

SECTION : 5F

Deliverables

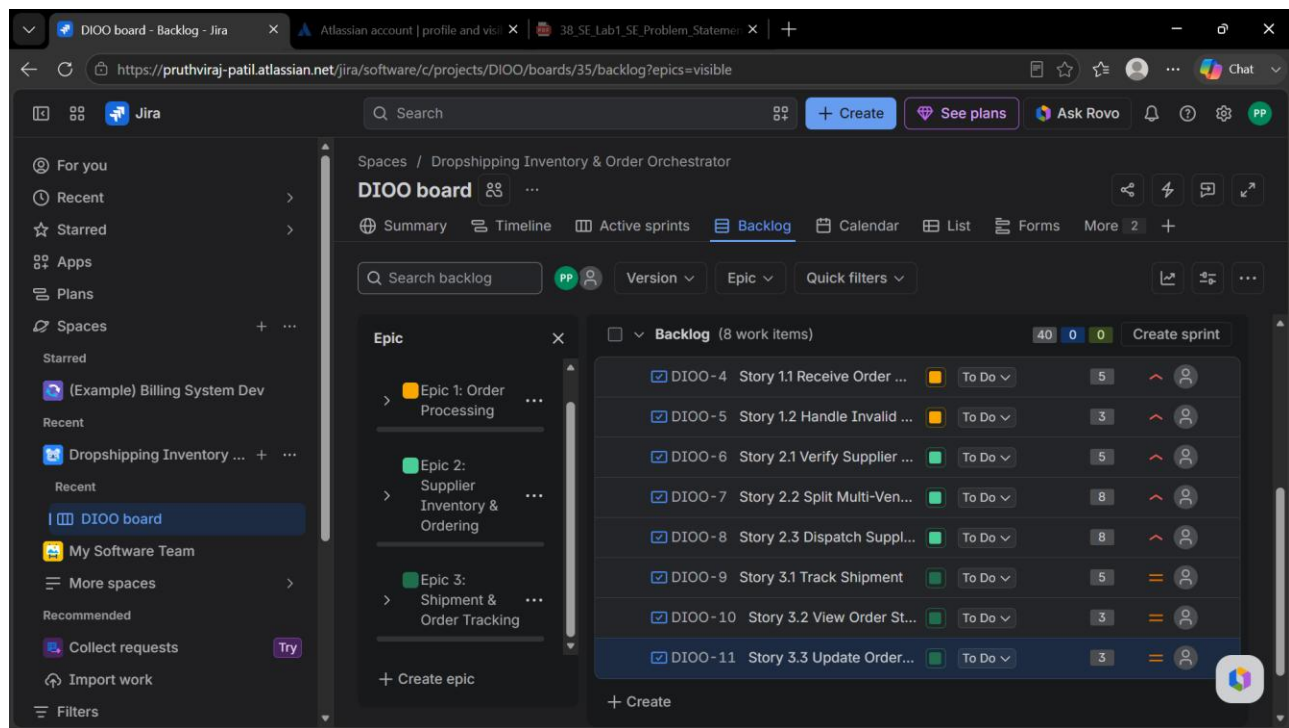

- Jira backlog with Epics and User Stories.
- Story point assignments.
- Sprint board (Active Sprint view).
- Burndown Chart.
- Brief document answering the reflection questions.

1. Epics :-

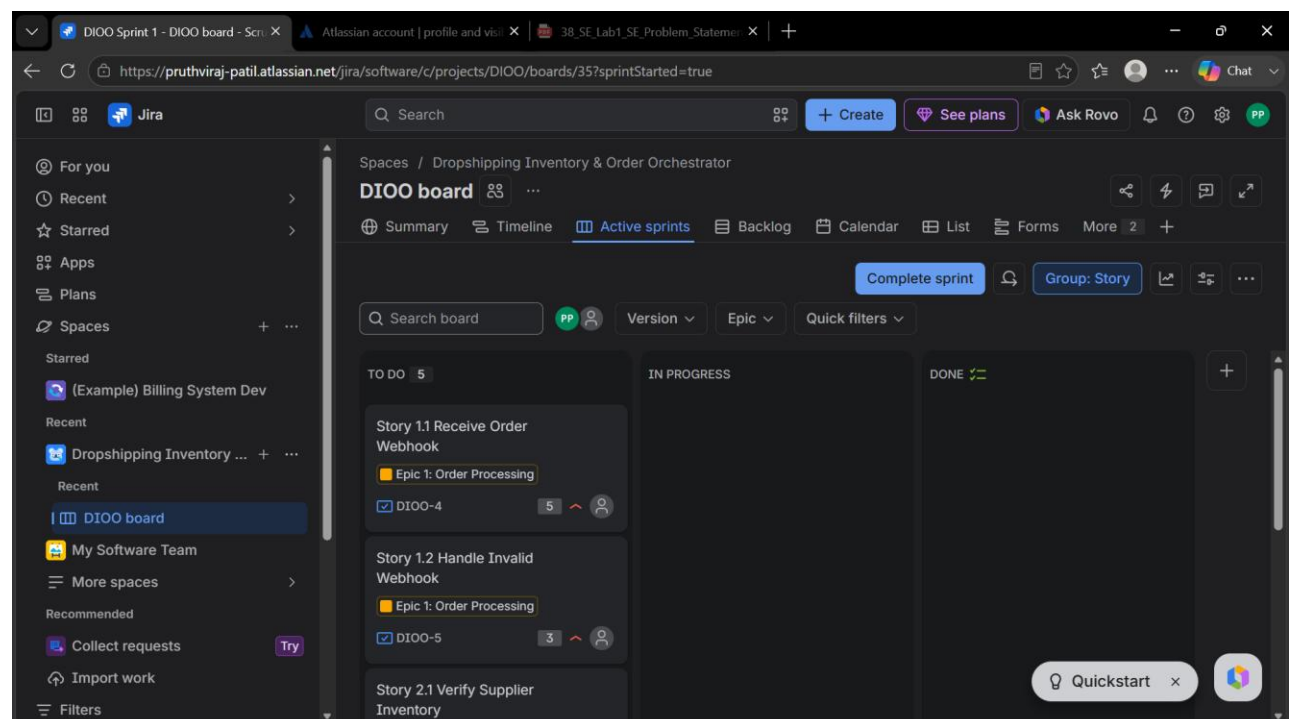

➔ Jira Backlog view showing the Epics created for the project.

2. Jira Backlog with User Stories and Story Points :-

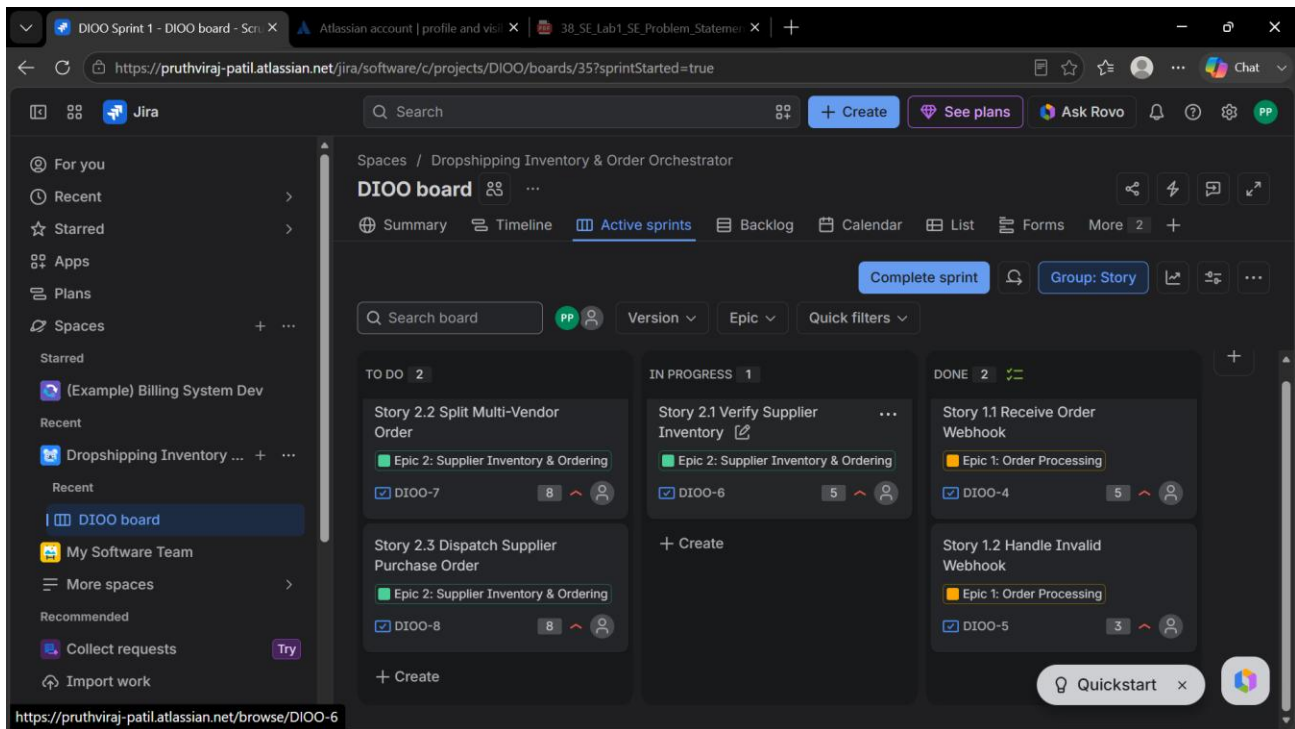

→ Jira backlog showing the Epics, User Stories, priorities and assigned story points.

3. Sprint Board – Active Sprint View :-

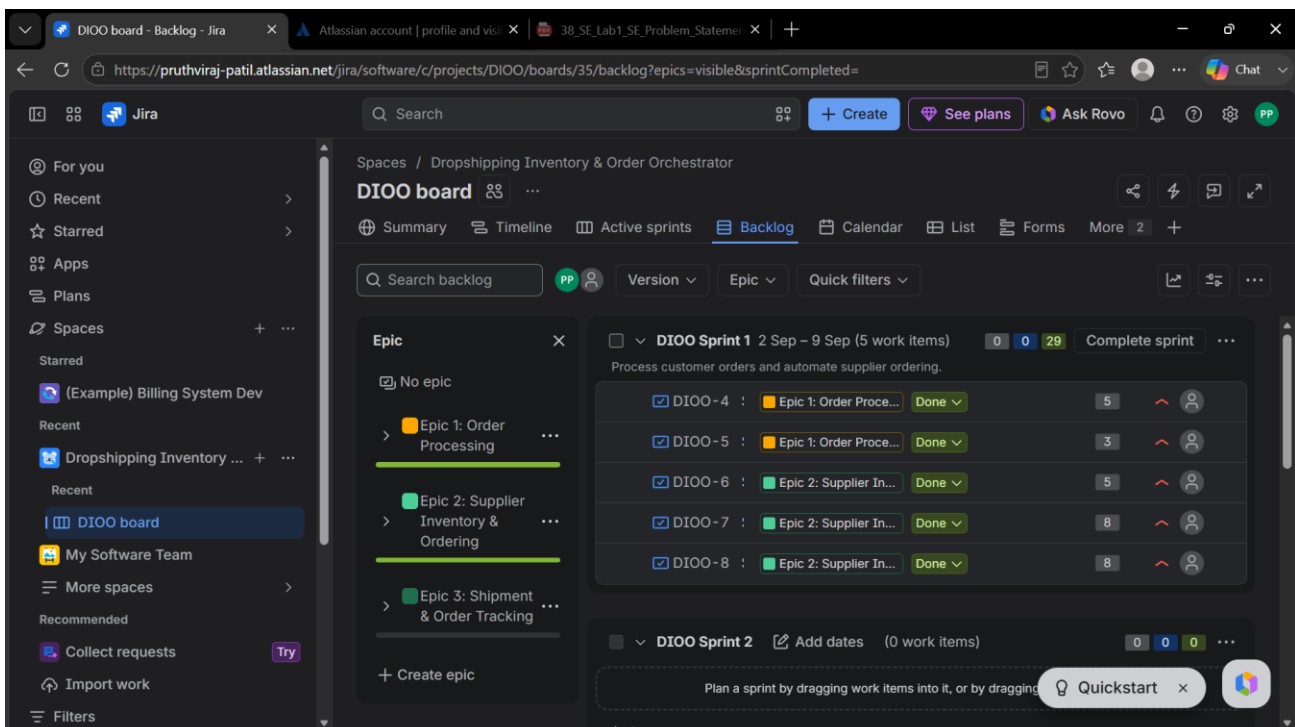

→ Active Sprint view showing the selected User Stories in the To Do column.

4. Sprint Progress – To Do, In Progress and Done :-

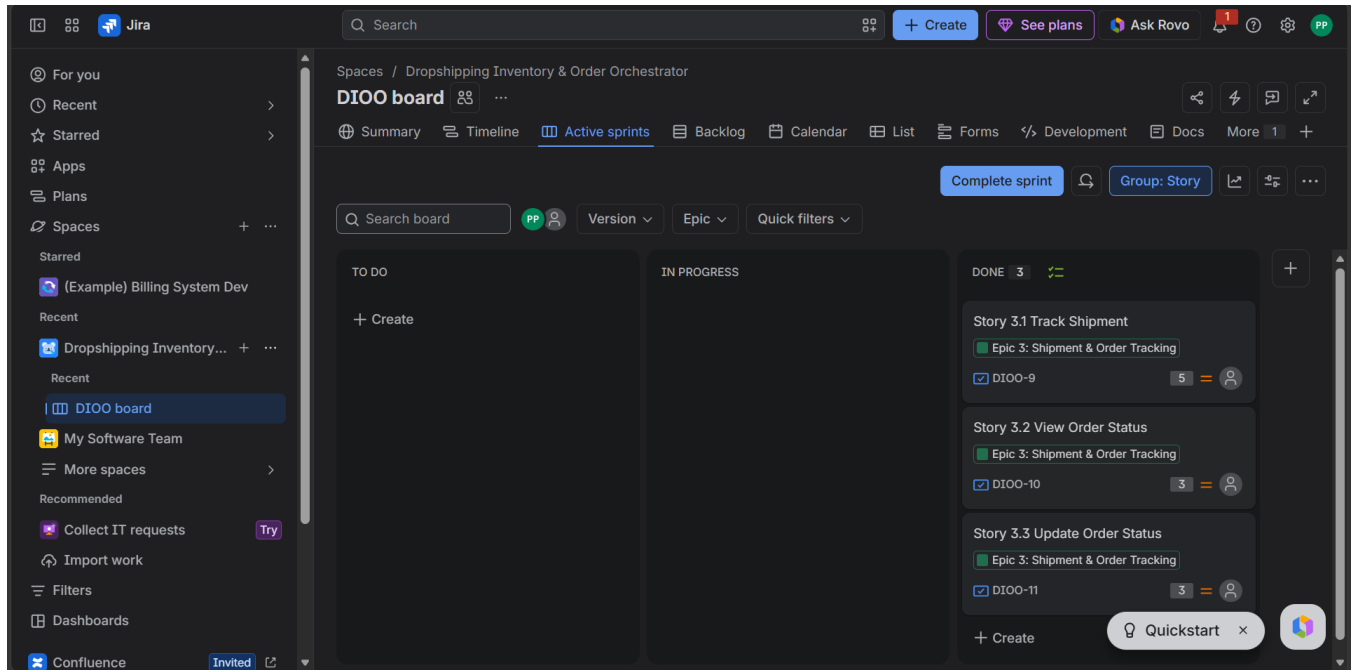

→ Active Sprint view showing the simulated progress of User Stories across the sprint columns.

5. Sprint Completion :-

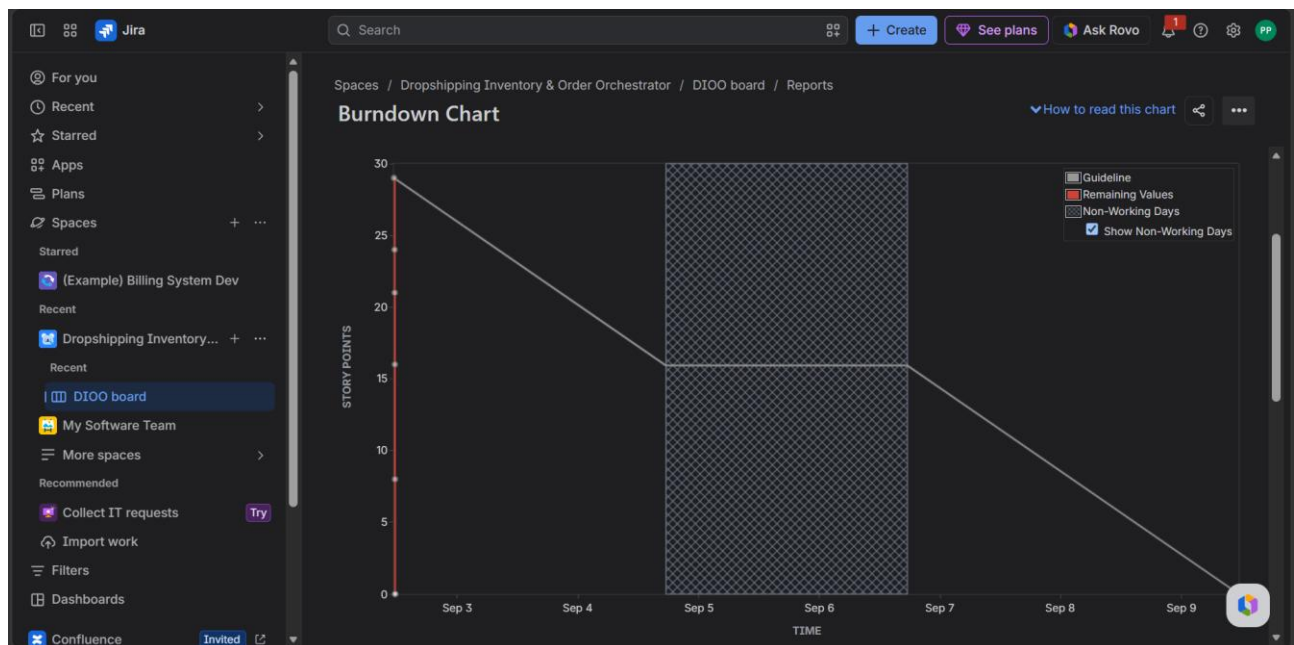

→ Jira backlog after completing Sprint 1, showing completed stories and Sprint 2.

6.Sprint 2 – Completion :-

→ Jira Active view showing completion of sprint 2 with all stories done.

7.Burndown Chart :-

→ Burndown Chart showing the remaining work decreasing during the sprint.

8. Reflection Questions

1. Did your estimations reflect the actual effort?

Yes. The story point estimates were reasonably close to the effort required for the selected User Stories. The estimates were useful for comparing the relative complexity of the work and planning the sprint.

2. Was your backlog well-prioritized?

Yes. The User Stories were arranged according to their importance and user impact. Higher-priority work was placed ahead of lower-priority work, which helped in selecting the stories for the sprint.

3. How did your simulated sprint align with your plan?

The simulated sprint followed the planned Scrum workflow. The selected User Stories were placed in the sprint and moved from To Do to In Progress and then to Done. The completed sprint view shows that the planned work was progressed and completed.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed a steady reduction in the remaining work during the sprint. The work reached the planned completion level by the end, indicating that the selected sprint workload was manageable for the simulated team.
